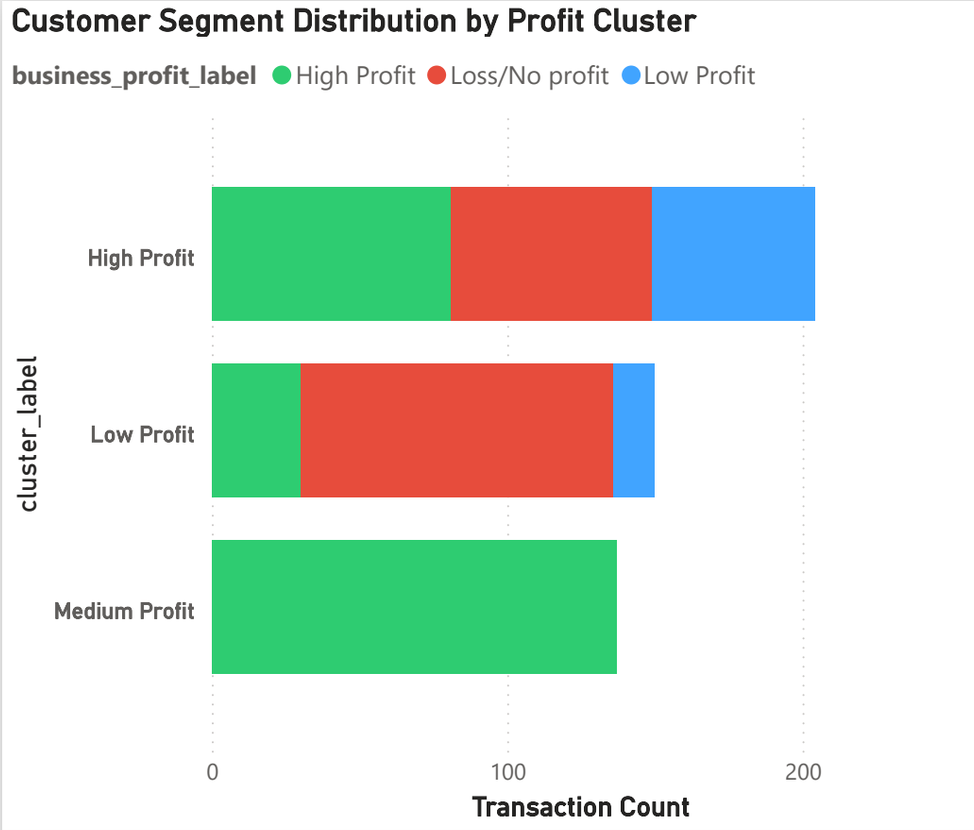
DATA MINING & CUSTOMER SEGMENTATION INSIGHTS



Association Rules Analysis

-No significant cross-category purchase patterns were detected during promotional periods (min. support threshold: 0.01).

-Finding: Promotions drive single-category demand. Customers respond to individual product promotions rather than cross-category basket building.

-Implication: Bundled promotions across categories are unlikely to outperform single-category promotional strategies based on this dataset.

-Cluster Finding: Medium Profit cluster skews heavily toward High Profit transactions, suggesting significant upside potential with optimized promotional targeting.

PROMOTION PERFORMANCE INSIGHTS & STRATEGY

Promo ROI Heatmap by Category & Location

product_category	Rural	Suburban	Urban
Beverages	186.38%	142.19%	137.73%
Dairy	60.89%	127.86%	231.23%
Household	175.57%	258.13%	125.01%
Personal Care	135.56%	102.12%	212.86%
Snacks	207.57%	155.04%	115.17%

Strategic Recommendations

1. Scale Suburban Household promotions; highest ROI combination at 258%, outperforming all other category-location pairs.

2. Reallocate Dairy Rural budget to Urban. Rural Dairy ROI (61%) is 4x lower than Urban (231%). Shift spend immediately.

3. Expand Snacks in Rural markets; 207% ROI suggests untapped demand with low competition.

4. Review 17.4% loss-making promotions quarterly. Eliminate underperformers before they run to protect margin.

5. Apply location-specific strategies for Personal Care; Urban ROI (213%) vs Suburban (102%) shows location matters more than category.
